Easy off

PRIMO moulding – the ideal choice!

PRIMO has made moulding in its own factories for more than 50 years. The company constantly develops new solutions and profiles, while retaining its basic range, so that customers' moulding can be supplemented year after year with the same design. Because our moulding does not fade or discolour over time, it is easy to make partial improvements, as and when required.

Naturally, PRIMO provides comprehensive project planning materials, fitting instructions and dwg format files with sectional diagrams and profiles. PRIMO also provides advice at every stage of the process, whether its the choice of solution, project planning, at the construction site or subsequently with delivery and commissioning.

- Standard
- Adapted for customer requirements
- Painted
- ... Your choice

The PRIMO range of hard plastic moulding meets all requirements for finishing at floors, walls, doors, ceilings, kitchen worktops, etc. The moulding is easily adjusted and easy to fit with a minimum of waste, unaffected by humidity and available in a

broad range of colours and wood types. The wide range of sizes, shapes and colours means there is a solution for every finishing task and every style.

Hard moulding is available as trim profile, raised beading, cornice, quadrant, triangular floor moulding, angle profile, corner profile, scotia moulding, skirting, architrave, kitchen moulding, edge moulding and wall moulding.

Soft moulding is used where durability and easy cleaning are required. The moulding is used for example joined in wet rooms, between the linoleum floor and wall, around corners and as stair nosing.

Moreover, we have a range of finishing moulding and stair nosing. Skirting is available with and without a foot and as raised beading. For ultra-easy fitting, use self-adhesive skirtings.

Soft moulding is available as soft fluted skirting, angle moulding, finishing moulding, stair nosing (with or without overlap), handrails, T-moulding for shower cabinets and string cover.
