PLASTIC:

Does not rot

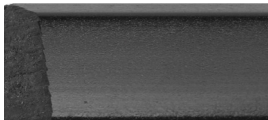

Does not split

Does not break

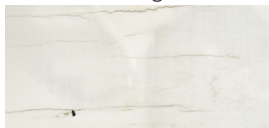

Does not require painting

WOOD:

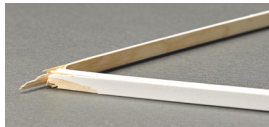

Rotting...

Splits...

Breaks...

Requires painting...

GOOD REASONS TO CHOOSE **PLASTIC** MOULDINGS

All PRIMO mouldings are made from a durable and flexible plastic material. They easily follow the unevenness of the wall and are available in many variants.

The mouldings can be customised with incredible precision, professional result and with a minimum of waste. All you need are ordinary hand tools.

In addition, many of the mouldings have smart benefits, such as hiding cables and can be removed for wallpapering and painting. There is also a wide range of fittings, to ensure a beautiful result.

The mouldings are unaffected by moisture and therefore do not rot or discolour. This protects you against the development of harmful fungi and bacteria that create an unhealthy indoor climate.

PRIMO mouldings are ready to use when delivered, but can be painted if a different colour is desired.

Mouldings for your entire home

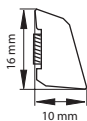

SELF-ADHESIVE MOULDINGS

PRIMO is at the forefront of innovative solutions that fulfil the needs and wishes of the DIY enthusiast. With the new range of self-adhesive mouldings, developed in collaboration with professional craftsmen, installation tools are no longer needed and the path from an idea to renewal with a finished satisfactory result - is shortened.

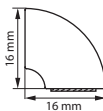

Once the moulding is the right length, all you need to do is remove the protective film from the adhesive foil on the back and mount the moulding with a light pressure. The mouldings are delivered finished in white but, like the other mouldings in the PRIMOS range, can be painted in the colour of your choice.

PRIMO mouldings make it easy to hide loose wires. We offer a wide range of cable hiding products so you can find a solution that suits your home. Hide wires and cables from your TV, along the floor or wall. Our smart click mouldings for wire and cable hiding always provide an elegant finish.

CABLE CONCEALMENT

Classic skirting and architraves are mounted on a smart click system, that ensures quick installation without visible screws or nails. If you need to rewire or paint, simply click the skirting on and off. It does not get much easier than this.

GLAZING BEADS

Maintenance-free glazing beads do not absorb water or dry out in the same way as wooden mouldings. This protects you against rot and moisture and gives the window a long service life. The mouldings can be used for single and double glazing as well as openable and fixed windows. An effective solution for window renovation

Plastic glazing beads are an effective solution for renovating wooden windows

FiberCore glazing beads

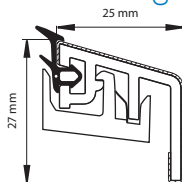

FiberCore glazing beads are both an energy-efficient and durable solution for all exposed areas around windows and doors. PRIMO's FiberCore glazing beads are a combination of natural plant fibres and plastic. This combines nature's strong raw material with the unique and maintenance-free properties of plastic. As a result, FiberCore glazing beads insulate 160 times better than aluminium. FiberCore glazing beads significantly reduce heat loss as they have a U-value of 0.18. The lifespan of the window is also extended as the mouldings do not rot or dry out as a result of the changing seasons. The glazing beads are installed with a unique clip system that ensures quick and easy installation without visible nails or screws.

KEEP THE HEAT IN ...AND SAVE MONEY!

PRIMO gaskets are suitable for all standard window and door types, whether wood, plastic or wood-aluminium.

Made from weatherproof materials for outdoor use, the gaskets are also suitable for a wide range of other applications where optimal sealing is required. The gaskets prevent draughts, chatter, cold and minimise external noise.

The main cause of faulty gaskets is the daily stresses and years of constantly changing temperatures. Leaky windows and doors result in unpleasant draughts and ever-increasing energy costs. This is precisely why PRIMO developed the new Eco Soft Line series. Due to the excellent oak properties, modern thermoplastic elastomers (TPE) have replaced vulcanised rubber (EPDM) and are always used where the highest quality is required.

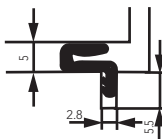

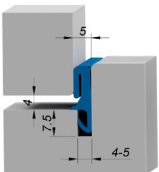

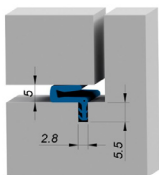

The many benefits of choosing Eco Soft Line are:

- | | | | |
|---------------------------|-------------------|---------------------|---|
| Free from plasticisers | ✓ Easy to clean | ✓ non-ageing | ✓ |
| Reduces surface noise | ✓ Weldable | ✓ 100% recycable | ✓ |
| Minimums temperature -40° | ✓ Ozone resistant | ✓ UV resistant | ✓ |
| No water absorption | ✓ PVC free | ✓ Weather resistant | ✓ |

SOFT SKIRTINGS

The soft skirtings provide robust and attractive transitions between floor and wall. They are particularly suitable for e.g. high-traffic environments and where good hygiene is a must, as the mouldings are easy to clean.

When welded together, they are well suited for wet rooms, between linoleum floors and walls and as a finishing touch on stairs.

The products are typically used where the desire for maintenance-free and easy-to-clean surfaces are highly prioritised

PRIMO's many plastic profiles for use in construction are developed in close collaboration with industry professionals.

The products can be customised and installed with ordinary hand tools and are as easy to work with as other types of building materials.

At the same time, the durability and maintenance benefits of plastic are fully preserved.

PLASTIC - a good solution

Plastic is everywhere in our daily lives, and for good reason. Plastic has properties that make it extremely durable and it has the unique advantage that it can be recycled - up to several times.

Unlike wood, plastic doesn't need to be painted or treated, and at the end of its lifetime, it can live on - where other materials end up in the incinerator!

Personalised service

Even the most comprehensive catalogue or websites can't answer every question you might have.
